WHAT WE DO

We offer a wide range of services that help you get the most out of IP technology and solutions. We also offer outstanding pre-sales and post-sales support.

SERVER AND STORAGE DESIGN AND SUPPLY
We specialise in server and storage solutions optimised for video surveillance. We build servers to exact operational specifications – from off-the-shelf solutions to bespoke designs, including multi-server and multi-site installations. We understand the importance of the site operating as normal when issues arise.

NETWORK DESIGN AND SUPPLY
GVD has designed and commissioned networks for both the IT and security sectors. We can design a new network using our manufacturer partners or – as is the case with many existing infrastructures – make recommendations for integrations into an existing network infrastructure helping to maximize the current investment.

INSTALLER AND END USER TRAINING
We train security solution installers in IP networking and video surveillance. Our dedicated training centre (the nIPx) offers state of the art facilities with a fully integrated demonstration security system. We also run CPD courses to support consulting engineers with tender specifications. We offer hands-on, practical training to sell, specify, install and maintain

REMOTE, ONSITE SUPPORT AND COMMISSIONING
Remote support and commissioning from a dedicated technical support team making it a very cost-effective service. We also offer on-site support with advanced certified engineers attending the site to assist with new installations or maintenance. We have a dedicated technical support team to back up the solutions we provide and are always available to answer technical queries or make recommendations.

PRODUCT DISTRIBUTION
We are distributors for the leading brands in the industry, delivering the most cutting-edge technology available. We supply a wide range of products including server and storage solutions, IP cameras, video management software, video analytics, network infrastructure and access control from Tier1 manufacturers such as Dell, Intel, Milestone, Avigilon, ACTi and more.

INTELLIGENT WIRELESS AND WI-FI
GVD supplies a range of wireless solutions including fully managed Wi-Fi solutions suitable for schools, colleges, universities, hotels, apartment complexes, office blocks and large event venues. We also supply a range of outdoor solutions including point-to-point and multi-point solutions that are suitable for multiple applications – including CCTV and voice or data solutions.

PRE-CONFIGURATION OF HARDWARE & SOFTWARE
We offer a pre-configuration service. It means that when you receive your solution from GVD, it is ready to go 'out of the box' – all you have to do is mount, connect and power-up. This can include assigning IP addresses to cameras and installing Milestone video management software, to configuring network infrastructure hardware. Many security integrators opt for this service in order to reduce time spent on-site.

SOLUTION AND INTEGRATIONS DESIGN
We can design surveillance solutions with particular attention to integrations such as access control, intruder alarms, video analytics and other third party integrations.
